

AssetTrak Reporting

M & K Recovery Group's web-based AssetTrak is an inventory process for the tracking and settlement of complete units, subassemblies, scrap commodities, and refining material. With AssetTrak auditing, clients are given the flexibility of customized reporting, reverse logistics, and the asset management solution suited to their requirements.

AssetTrak offers comprehensive "Chain-of-Custody" downstream reporting, ensuring environmental compliance and final disposition of all materials remarketed, recycled, or refined. This auditable inventory management program provides complete visibility of every serialized asset and scrap material as it moves through each secure phase of processing. No hazardous waste is land-filled.

De-manufacturing and segregation of material is conducted in EPA-permitted facilities. Sensitive electronic wastes are properly recycled and product is accounted for, eliminating potential risk and liability. M & K's primary objective is protecting your organization from noncompliance liability by executing and managing secure, compliant, end-of-life IT asset management and disposition services, including:

- Secure Data Erasure, Degaussing & Destruction
- Compliant IT Recycling & Refining
- Logistics Management
- Testing/Remarketing Systems & Components
- Web-based Reporting
